

# ROBIN CROW

---

## **ROBIN CROW TECHNICAL REQUIREMENTS**

Robin Crow is easy-to-work-with and will be as flexible as possible in working out details on site. A short sound check will be needed to check microphone levels and run through the video cues etc.

His technical needs are relatively simple.

### **SOUND**

Please provide:

- Professional sound system with external speakers which will adequately cover the performance area and project well to the number of people at your event
- 2 wedge monitors
- 1 wireless microphone on a stand with a metal base
- 2 wireless microphones for audience Q&A (if applicable)

*Note:* Please make sure the mixing console is located at the back of the room.

### **AV**

During Robin's keynote, he will present two videos that will include sound. He will provide digital files well in advance of your event.

### **Lighting**

Please make sure the stage is lit better and different than the rest of the room. Front lighting is most important as well as a general stage wash. If possible, the audience should be approximately two-thirds darker than the stage area.

*Note:* You are welcome to record and/or video Robin's presentation and use it any way you would like.
